SUMMARY:

A site inspection was conducted in April 1991. No ground water samples were taken, but subsurface samples indicated the presence of some heavy metals and PNAs. There are 24 city of Bethany drinking water wells that serve approximately 963 persons per well within the target distance from the site. There are also 22 domestic wells within this same distance. We concur with the recommendation to take additional samples that would eliminate the ground water data gap.
